Education

Thapar Institute of Engineering and Technology
B.Tech in Computer Science Engineering

Aug 2023 – July 2027
Current CGPA: 9.55

Ryan International School, Ludhiana
Class 12 (Senior Secondary Education)

July 2023
Percentage: 96.7%

Experience

Aigetai Pvt. Ltd.
AI Developer Intern

July 2025 – October 2025

- Developed backend services and NLP pipelines for a social media platform, integrating transformer-based models and LLM APIs to enhance user-generated content.
- Built data processing and inference pipelines in Python and integrated ML services with REST APIs for production-ready AI features.

Technical Skills

Programming: Python, C++, Go (Golang), JavaScript

Backend: FastAPI, Flask, Node.js, REST APIs, Asynchronous Processing, Background Workers, Server-Sent Events, Distributed Systems Fundamentals

Databases: SQL, MongoDB, MySQL, Firebase Realtime Database, Supabase

Web Development: HTML, CSS, React, React Router, Tailwind CSS

Machine Learning: PyTorch, TensorFlow, scikit-learn, XGBoost, Random Forest, Logistic Regression, Transformers, OpenCV, Wav2Vec2, TF-IDF, NLTK

DevOps & Tools: Docker, Docker Compose, AWS EC2, CI/CD, Git, GitHub, MLflow, DVC

Projects

Agentic AI Sales CRM System — *Python, FastAPI, React, MongoDB*

GitHub

- Developed a full-stack CRM platform with automated lead enrichment, scoring, and outreach workflows using a modular multi-agent architecture.
- Implemented asynchronous background workers and real-time log streaming using Server-Sent Events to support scalable campaign execution.

Failure Injection & Observability Engine — *Go (Golang), Docker, CLI, Distributed Systems*

GitHub

- Engineered a production-grade backend system in Go to simulate real-world service failures (latency, timeout, flaky, error injection) with structured JSON logging, enabling end-to-end observability of request-level metrics.
- Built a concurrent log analysis and root cause detection engine using goroutines and worker pools, computing P95/P99 latency, detecting anomalies, and mapping them to actionable diagnostics via rule-based inference.

Linear.app Clone — *Next.js 15, TypeScript, Supabase, Tailwind CSS*

GitHub

- Built a high-performance issue tracking platform replicating Linear.app with keyboard-first workflows, command menu navigation, and real-time collaboration.
- Implemented Kanban drag-and-drop boards, optimistic UI updates, and live synchronization using Supabase Realtime and PostgreSQL backend.

Find-It – Lost & Found Platform — *React, Node.js, Express, MySQL, JWT*

GitHub

- Developed a full-stack campus lost-and-found system with role-based authentication for students and faculty using JWT-based secure login.
- Implemented RESTful APIs for reporting lost/found items, claim management, and image uploads using Express.js, MySQL, and Multer middleware.

Achievements

- Completed the Machine Learning Specialization by Stanford University and DeepLearning.AI, taught by Andrew Ng.
- Awarded **Merit Scholarship for three consecutive years** at Thapar Institute of Engineering and Technology for ranking among the top students in the Computer Science program based on academic performance.
